

## **Waste Treatment Plant Project**

## 2016 Supply Chain Collaboration Event

# **Engineering Submittals Process Overview**

### Scope and Purpose

#### Purpose:

- Collaborate with suppliers with identify issues in regards to supplier submittals
- Provide overview of internal BNI supplier submittal review process
- Highlight why the WTP project is different than others
- Identify recommendations for improvement

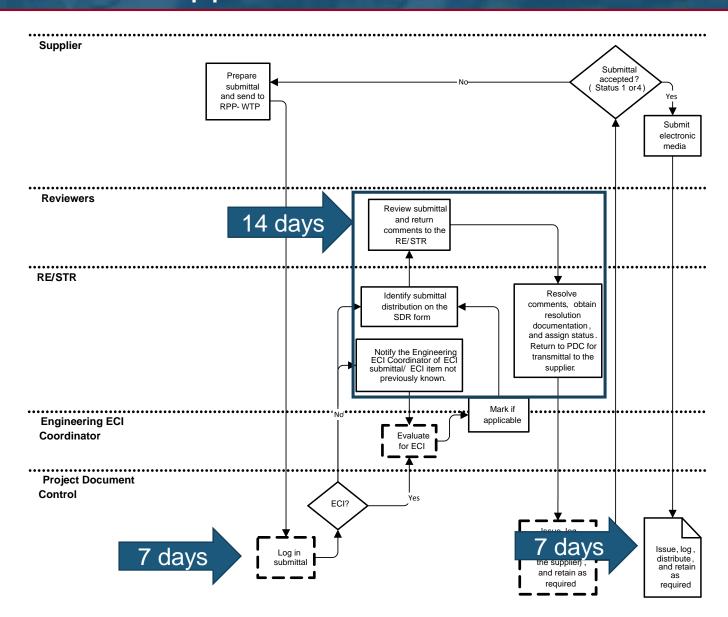

## Leadership Covenants

- Treat colleagues with mutual respect, trust, and dignity and believe they are acting in the best interest of the company.
- Help each other; ask for and give help and welcome it freely (it is not a sign of weakness). Go out of the way to provide extra support to fellow employees. Share experiences and lessons learned, both successes and failures.
- Communicate early, honestly, and completely with all who have a direct interest in the subject. Listen to others' points of view.
- Earn trust by accepting and honoring agreements, keeping promises, and discussing needed changes before acting.
- Never undermine colleagues directly or indirectly.
- Work jointly to resolve disagreements in good faith.
- Contribute constructively by exercising the highest level of professional and ethical behavior.

## BNI Internal Supplier Submittal Review Process

#### BNI Internal Supplier Submittal Review Process

- Supplier Document Review Matrix
- Submittals reviewed by internal Engineering disciplines and External disciplines.
- Can have as many as 11 or 12 reviewers.
- Certain document carrows Ionger to review.

## VIT PLANT

### BNI Technical Reviewer Requirements

#### Supplier Document Request and Review Expectations

- Reviewers are to avoid changes to accomplish minor improvements to an already adequate design.
- The reviewers return submittal comments to the RE, including sufficient basis or reference (for example, specification reference) to demonstrate submittal non-compliance with procurement document requirements, interfacing design, or design criteria.
- Reviewers know the scope and technical requirements of the MR/SR and associated specifications.
- Limit review to key features as detailed on the requirement drawings.
- Internal features of the equipment that are the responsibility of the supplier do not receive comments unless they conflict with specific requirements of the PO. Supplier is the design authority if given that responsibility.
- Requirements beyond those documented in the PO are not to be transmitted as comments until the PO has been augmented to support the comment.

## Why do submittals cycle?

#### BNI Internal Self-Assessment:

- 36% of submittal revisions due to older orders and WTP changing requirements
- 64% by supplier changes, DCN, ECNs, and SDDRs

#### BNI Factors:

- Changing Requirements
- Out of scope comments
- Different Reviewers for each revision
- Comments not referencing requirements
- Statusing minor typographical errors with code 2
- Requirements specific to WTP

#### Supplier Factors:

- Previous comments not incorporated
- Comments not incorporated have no justification identified

#### Document Category Number Focus: 8.0, Calculations

- Reasons for cycling of these submittals
  - Software V&V and computer platform not identified
  - Assumptions not clearly identified, hidden within the text
  - Assumptions requiring verification not clearly identified
  - Calculations containing copyright/proprietary information
- 24590-ENG-F00049, Supplier Calculation Checklist
  - Required for all calculations (Q and CM, according to a graded approach)
  - Returned to supplier with comments so supplier knows what they are being reviewed against
  - Since implementation, quality of supplier calculations has improved

## How Can Suppliers Help

- Know your contract
- Request from the RE the requirement section if not provided
- Notify the RE when comments are deemed out of scope
- If out of scope comments are valid, have upfront discussions about requests for equitable adjustment (REAs)
- Ensure all the comments are incorporated or dispositioned prior to submitting

## Upcoming Improvements to Process

- Electronic submittal review process
  - Establishes due dates and identifies late actions
  - Due dates will be established based on 28 day review cycle (management expectation)
  - Consolidates and permits all reviewers to see all comments to prevent duplicate comments

- Implements NQA-1 on a graded approach for CM orders

- Specification focusing on submittal "templates" for different DCNs
  - Establishes expectations for supplier submittals
  - Provides consistency across suppliers that will support reviews

- WTP welcomes suggestions for improvements
- If suppliers succeed, WTP succeeds
