

Team Vit Plant

Terry R.
Project Management/Project Controls

Terry R.
Project Management/Project Controls

Organization	Project Management/Project Controls
Position	Assistant Project Manager
Location	Project Office North Annex (PONA)
Years with WTP	7.0
Years with Bechtel	8.0

Terry has been with the Vit Plant for seven years and worked on each of plant's major nuclear facilities. He started in Project Controls, then was selected for the Vit Plant Rotation Program and worked as a field engineer and superintendent in Construction. He has been with the Project Management organization for the past two years as the assistant project manager to the area project manager for the Pretreatment Facility.

Terry appreciates the diversity of his work and the opportunity to see the project come together from a project management perspective. He also likes interacting with a wide range of people and building relationships across the project.

Terry has a degree in English and applied to law school, but he realized his true interest was in construction. He then became a carpenter before he returned to school, earning a degree in construction management and joining Bechtel in Frederick as an intern in corporate Project Controls.

Terry enjoys sailing with his family in his spare time. Growing up, he worked in a boat shop, and he would eventually like to build wooden sailboats again.
